GOAL: Be your European vibration Sensor Partner

VibraSens is a European company that designs and manufactures vibration instrumentations such as industrial piezoelectric accelerometers, vibration sensors, vibration transmitters, signal conditioners, junction boxes, low noise cable assemblies, connectors, accessories and calibration equipments.

Mission
Vibrasens’ mission is:

• Be one of the European leaders in the manufacture and design of piezoelectric accelerometer and piezoelectric dynamic pressure sensor.
• Offer innovative piezoelectric vibration sensor for niche market and harsh environment (700°C).
• Offer private labelling of our products for companies who want to outsource their piezoelectric accelerometer and pressure sensor manufacture.
• Be the ideal partner in terms of pricing, reliability and technical support.

Industry served
Our piezoelectric accelerometers are used throughout the following industry : Power generation (Gas turbine, Steam turbine, Wind turbine, Hydro generator), Petrochemical & Pipeline industry, Offshore platform industry, General process industry, Research and development facilities, Metals & Mining, Pulp and paper, Waste water treatment, Research and development and many others…..

Applications
Industrial piezoelectric accelerometers can sense vibrations in terms of acceleration, velocity and displacement for machines such as : Air compressors, Air handlers, Pulp and paper dryer sections, Conveyors, Cooling towers, Fans, Fourdriniers, Gear boxes, Motors, Press sections, Presses, Stamping, Pumps, Roll and process equipment, Spindles, ...

Experience
We have more than 20 years of experience in the piezoelectric accelerometer design, especially in harsh and high temperature environment (500°C, 700°C or even more).

In order to maintain our international expertise we closely work with two university laboratories LCEP ( http://www.lcep.ens2m.fr ) and LPMO ( http://www.lpmo.edu ) based in Besançon and specialized in Piezoelectricity.

We also have the chance to be located in a region where piezoelectricity, microtechnics, microelectronic, mechatronic, micro-sensors and precision are well known words. Besançon hosts one of the biggest microtechnology fair in Europe ( http://www.micronora.com ) devoted to microtechnology and strong of 850 exhibitors from 25 countries.

All this friendly environment strengthens our knowledge and gives our company a competitive advantage in the piezoelectric vibration sensor technology.

Technology
With advanced product development and manufacturing facilities in Besançon-France, VibraSens has the skills, experience and resources to provide the products and services that will fulfill your requirements.

A modern production facility exclusively engaged in the design and manufacture of piezoelectric vibration transducers, piezoelectric pressure sensor and vibration instrumentations help us to maintain a high quality level in our core business.

Our manufacturing and test equipment ranges from basic precision machinery for providing high quality sensor components,
to custom-built machinery specifically designed for piezoelectric vibration sensor fabrication. During the years of development we have also built some specifically design systems to test our range of piezoelectric accelerometer. We have developed using ®Labview (National Instrument Trademark) a completely automated shaker test system to check the sensitivity and frequency response (up to 10 kHz) of our piezoelectric vibration sensors. Our controlled process includes laser and microplasma welding, helium leak tester, resistance welding, temperature cycling, high temperature brazing. All those processes and others are strictly controlled by our process specification document. We closely work with one of the best European company specialized in the manufacturing of hybrid circuit for the sensor industry. With this partnership, we are sure to stay ahead of this technology for the years to come.

**Why should you buy from us:**

We are focussed on the manufacture and design of piezoelectric vibration sensor. We could offer you the best quality price performance on the market. We invest heavily in our core business and keep all of our products up to state of the art technology. To better suit your market, we offer private labeling for all of our product line with two digits modifications in our part number. Whatever your market is, condition monitoring, balancing, vibration diagnostic services company, we will be happy to serve you and share our extensive expertise. We are looking forward to being your vibration sensor partner.
Piezoelectric Accelerometer Selection

Because they cover the broadest range of applications, piezoelectric accelerometers are among the most versatile.

Their main characteristics cover the range:
- temperature from cryogenic to +800 °C
- frequency from 0.1 Hz to 50 kHz
- resolution from 1 ug to 100 000 g

Their physical characteristics cover the range:
- Connector or integral cable
- MIL, industrial, RF connectors
- Few grammes to 200 grammes
- Stainless steel, aluminum or titanium material
- Hermetically or epoxy sealed

In a first approach, piezoelectric sensors can be distinguished by:
- Output (AC or DC, acceleration, velocity or displacement output)
- Piezoelectric material (ceramic, quartz, tourmaline,...)
- Transmission type, ®ICP, current, 4-20mA,...
- Stainless steel, aluminum or titanium material
- Hermetically or epoxy sealed

The table below sums up technology commercially available.

(1) ®ICP is a worldwide voltage transmission standard that uses a constant current source supply. Some manufacturers still offer proprietary current transmission which is not useful for standard application: AC acceleration up to 10 kHz and 500 meters, AC velocity up to 5 kHz and 1000 meters, displacement up to 1 kHz and 2000 meters.

(2) The AC acceleration signal can be externally conditioned to have concomitant AC velocity, AC displacement, DC acceleration, DC velocity or DC displacement.

(3) With no AC acceleration output, you will not be able to connect a portable analyzer with enveloping algorithm for roller bearing defect detection.

(4) Resolution is important if you plan to make measurements at low frequency (<10 Hz) with vibration parameters like velocity or displacement.

(5) This type of sensors covers the broadest range of characteristics: few grams to kilograms, epoxy or hermetically sealed, large choice of connector, top or side connector,.....

Introduction

VibraSens offers a comprehensive selection of ™ICP industrial piezoelectric accelerometers and vibration sensors in a variety of industrial packages. Each sensor utilizes proven annular shear or compression piezoceramic and is housed in a welded, hermetically sealed, stainless steel case to withstand harsh industrial environments.

General purpose, premium (Model 101, 103, 104, 108)
The most versatile, they use piezoceramic in the annular shear mode and provide Acceleration AC output (100 mV/g).
They usually sense vibration commonly find in industrial machinery: motors, fans, pumps, paper machine rolls, ....

General purpose, compact (Model 109)
They use piezoceramic in the annular shear mode and provide Acceleration AC output (100 mV/g).
They usually sense vibration commonly find in industrial machinery: motors, fans, pumps, paper machine rolls, ....

Low frequency (Model 101, 103, 104, 108)
They use piezoceramic in the annular shear mode and provide AC acceleration output with increased sensitivity (500mV/g).
They are used when low frequency measurement down to 0.1 Hz is necessary to balance or evaluate mechanical condition of low speed machinery: cooling towers, low speed agitators, hydromachinery, structural testing, ...

High frequency (Model 101, 103, 104, 108)
They use piezoceramic in the annular shear and provide acceleration AC output with reduced sensitivity (10mV/g). They are used for modal testing or when very high frequency measurements up to 20-30kHz are needed.

High temperature, ™ICP mode (Model 101.11 & 103.12)
They use piezoceramic in the annular shear mode and provide AC acceleration output up to a temperature of 150°C.

Multi output with Temperature (Model 101, 103, 104, 111, 113)
Temperature output (10mV/°C, +2°C to +120°C) is available for Model 101, 103, 105, 107, 111, 113. See ordering information to add the temperature output option.

4-20mA Vibration sensor (Model 125, 127)
They used the industry standard 4-20mA Loop that interfaces directly with PLC, DCS and 4-20mA monitor. Large choice of outputs are available: velocity, acceleration, RMS, equivalent Peak.
They are used in the rugged environments of industrial machinery monitoring. It allows continuous trending of overall machine vibration.

Note: M12 connector is recommended for European and Asian market. MIL-C-5015 is recommended for North American market.
* : Best seller
Mode (1) : A. Shear = Annular shear; Comp = Compression
Isolation (2) : I : Isolated from machine surface; I+FS = Isolated from machine surface+ Faraday shield
**Main Characteristics**

- Annular shear mode
- 10, 50, 100, 500 mV/g version available
- -55°C to 150°C (-67°F to 302°F)
- Dual case isolation with Faraday shield
- Submersible version (150 metres) with associated IP68 overmolded cable
- Life time hermetic sealing warranty (M12/Mil glass seal connector)

**Competitive advantage**

- Compare to obsolete compression design, annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity to cable motion. Annular shear mode is also less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
- 80 g dynamic range (thanks to exceptional bias stability) at elevated temperatures.
- Resistant to shock (magnet mounting) thanks to JFET transistor input.
- ESD and reverse wiring protection.
- The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres. Sensors with epoxy seal will always leak after few temperature cycles.
- M12 connector offers compatibility with numerous sensors used in automation. M12 overmolded cable assemblies are available from many cable manufacturers around the world. Mil cordset are expensive because they are only available from vibration sensor manufacturer.

**Description**

The hermetic sealed industrial piezoelectric accelerometer model 101 is designed to monitor the vibration in harsh industrial environment. It uses the industry standard ©ICP / ©IEPE / ©LIVM 2-wire voltage transmission technique with a 4 mA standard constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to EMC to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirement. Low frequency accelerometers (A=9) incorporate a low-pass filter within the conditioning electronic. This filter attenuates the sensor mechanical resonance and the associated distortion and overload.

**Typical applications**

Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version monitor the vibration on roller bearing, pumps cavitation, ... Medium frequency version monitor overall vibration on pumps, motors, fans, ... Low frequency model is used in the petrochemical, machine tool, and paper industries for monitoring of slow speed agitators, cooling towers, ... High temperature version is typically used where extra temperature protection is needed, such as the dryer section of a paper machine.

@ICP Accelerometer Model 109
Compact, Top connector

Main Characteristics
- Annular shear mode
- 20 kHz Bandwidth
- 10, 50, 100 mV/g
- -55°C to 120°C (-67°F to 250°F)
- Dual case isolation with Faraday shield
- Submersible version (150 metres) with associated IP68 overmolded cable
- Life time hermetic sealing warranty (M12/Mil glass seal connector)

Competitive advantage
- Compare to obsolete compression design, annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity to cable motion. Annular shear mode is also less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
- Exceptional bias stability at elevated temperatures. (improved dynamic range, ex 80g dynamic for 100 mV/g sensitivity)
- Resistant to shock (magnet mounting) thanks to protected Mosfet transistor input.
- ESD and reverse wiring protection.
- The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres.
- M12 connector offers compatibility with numerous sensors used in automation. M12 overmolded cable assemblies are available from many cable manufacturers around the world. Mil cordsets are expensive because they are only available from vibration sensor manufacturer.

Description
The hermetic sealed industrial piezoelectric accelerometer model 109 is designed to monitor the vibration in harsh industrial environment. It uses the industry standard ©ICP / ©IEPE / ©LIVM 2-wire voltage transmission technique with a 4 mA standard constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to EMC to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements.

Typical applications
Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version (10mV/g) monitor the vibration on roller bearing, pumps cavitation, ... Medium frequency (100 mV/g) version monitor overall vibration on pumps, motors, fans, ...

**ICP Accelerometer Model 103**

**Premium, Side connector**

**Main Characteristics**
- -55°C to 150 °C (-67°F to 302°F)
- ®ICP transmission mode
- Annular shear mode
- Dual case isolation with Faraday shield
- Low, medium and high frequency version
- High temperature version
- IP67 with associated cable (B=2 only)
- Complies with API 670 requirements (A=6 only)

**Competitive advantage**
- Annular shear mode is less susceptible to transverse vibrations and better immune to electronic saturation at high frequency
- Exceptional bias voltage stability at elevated temperatures.
- Low cost IP67 overmolded M12 cable assembly
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation

**Description**
The hermetic sealed industrial piezoelectric accelerometer model 103 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ®ICP 2-wire voltage transmission technique with a 4 mA minimum constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to ESD to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements. Low frequency accelerometers (A=9) incorporate a low-pass filter within the conditioning electronics. This filter attenuate the sensor mechanical resonance and the associated distortion and overload.

**Typical applications**
Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version will monitor the vibration on roller bearing, pumps cavitation, .... Medium frequency version will monitor overall vibration on pumps, motors, fans, ... Low frequency model is used in the petrochemical, machine tool, and paper industries for monitoring of slow speed agitators, cooling towers, ....

Fig 14b: Low Frequency response, amplitude
@ICP Accelerometer Model 104
Premium, Side connector

Main Characteristics
- -55°C to 120 °C (-67°F to 250°F)
- ®ICP transmission mode
- Annular shear mode
- Dual case isolation with Faraday shield
- Low, medium and high frequency version
- High temperature version
- IP67 with associated cable (B=2 only)
- Complies with API 670 requirements (A=6 only)

Competitive advantage
- Annular shear mode is less susceptible to transverse vibrations and better immune to electronic saturation at high frequency
- Exceptional bias voltage stability at elevated temperatures.
- Low cost IP67 overmolded M12 cable assembly
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation

Description
The hermetic sealed industrial piezoelectric accelerometer model 104 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ®ICP 2-wire voltage transmission technique with a 4 mA minimum constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to ESD to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements. Low frequency accelerometers (A=9) incorporate a low-pass filter within the conditioning electronics. This filter attenuate the sensor mechanical resonance and the associated distortion and overload.

Typical applications
Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version will monitor the vibration on roller bearing, pumps cavitation, .... Medium frequency version will monitor overall vibration on pumps, motors, fans, ... Low frequency model is used in the petrochemical, machine tool, and paper industries for monitoring of slow speed agitators, cooling towers, ....

- -55°C to 120°C (-67°F to 248°F)
- ®ICP transmission mode
- Annular shear mode
- Low, medium and high frequency version
- IP67 with associated cable (B=2 only)

Competitive advantage
- Annular shear mode is less susceptible to transverse vibrations and better immune to electronic saturation at high frequency
- Exceptional bias voltage stability at elevated temperatures
- Low cost IP67 overmolded M12 cable assembly
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation

Description
The epoxy sealed piezoelectric accelerometer model 108 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ®ICP 2-wire voltage transmission technique with a 4 mA standard constant current supply. Signal ground is isolated from the mounting surface to prevent ground loops. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements. Low frequency accelerometers (A=9) incorporate a low-pass filter within the conditioning electronic. This filter attenuates the sensor mechanical resonance and the associated distortion and overload.

Typical applications
Ideal for walk-around vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version monitor the vibration on roller bearing, pumps cavitation, ... Medium frequency version monitor overall vibration on pumps, motors, fans, ... Low frequency model is used in the petrochemical, machine tool, and paper industries for monitoring of slow speed agitators, cooling towers, ... Model 108 sensors are not recommended for permanent monitoring because they have external faraday shield subject to loss of isolation. For such applications, Models 101, 103, 104, 105, 107 with internal faraday shield are prefered.

@ICP PiezoVelocity sensor Model 111
Top Connector

Main Characteristics
- 100 mV/ips or 4 mV/mm/s
- -55°C to 120°C (-67°F to 248°F)
- ©ICP transmission mode
- Annular shear mode
- Dual case isolation with Faraday shield
- IP67 with associated cable (B=2, 3 only)

Competitive advantage
- Annular shear mode is less susceptible to base strain.
- Ultra low noise electronic
- Miswiring and surge protections
- Low cost IP67 overmolded M12 cable assembly
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation.

Description
The hermetic sealed industrial piezovelocity transducer model 111 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ©ICP 2-wire voltage transmission technique with a 4 mA standard constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to EMC to a minimum. Annular shear mode design will prevent from thermal transient and base strain. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range.

Typical applications
Velocity is the preferred measurement for most rotating machines with rolling element bearings. Unfortunately it is sometimes impossible to get velocity (with digital or analog integration) from standard piezoelectric accelerometer: very high frequency noise can overload the accelerometer and saturate the output. Piezovelocity sensors use an internal integration circuit which inherently decrease high frequency signals allowing better measurement of low frequency signal. Paper machine dryers (when steam leaks), pumps (cavitation high frequency noise) are prone to such phenomenon.

Options 5, 7, 8 are not stocked. Leadtime : 2 to 4 weeks.

CC : Cable Type (only integral cable B=5, 7, 8)
- 01 : *Polyurethane twisted pair cable (90°C)
- 02 : *Teflon FEP twisted pair Cable (200°C)
- 03 : Radox twisted pair cable (120°C, halogen free)
- 12 : Teflon FEP twisted triple Cable (200°C). For TO option.
- 13 : Radox twisted triple (120°C, halogen free). For TO option
- 31 : *Polyurethane 4 conductors cable (90°C). For TO option

DD : length in metre (only integral cable B=5, 7, 8)

Model 113.01-A-2 with Overmolded M12 cable assembly

Options :
Temperature output
T0 : 10 mV/°C. (+2° to +120°C)
Not available with Mil-C-5015 connector

Special Agency Approval
None

Accessories (Machine thread):
- M6 : M6x1 Bolt, captive, hex socket
- M7 : 1/4" 28 UNF 2A Bolt, captive, hex socket

Special Engraving :
Add ZXX at the end of the part number.
XX is a number supplied by VibraSens

*Most Popular model (in stock) :
113.02-6-2 / 113.02-6-1

Ordering example :
113.02-6-2-M6 piezovelocity sensor, 100 mV/ips, M12 top connector

Specifications (24°C)

Dynamic
- Sensitivity A=6 ................................................................. 100 mV/ips ±10% (4 mV/mm/s)
- Frequency response (fig. 4a, 4b) A=6 .............................. ±10 % : 2.5 to 3500 Hz
- Mounted Resonant frequency A=6 .............................. ±3 dB : 1.9 to 7000 Hz
- Dynamic range A=6 ................................................................. 16 kHz Nom
- Transverse response sensitivity (20Hz, 5g) .............................. <5%

4-20 mA Vibration Sensor Model 125
Top Connector

Main Characteristics
- Annular shear mode (better than obsolete compression design)
- Velocity (RMS, Peak) or Acceleration (RMS, Peak)
- Dynamic output available: Velocity or Acceleration
- Temperature output available (10 mV/°C)
- Dual case isolation with Faraday shield
- Submersible version (150 metres) with associated IP68 overmolded cable
- Life time hermetic sealing warranty (M12/Mil glass seal connector)

Competitive advantage
- Price
- Compare to obsolete compression design, annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity of cable motion (compression design will be affected by cable motion in the velocity range: 3Hz to 1000 Hz). Annular shear mode is also less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
- Resistant to shock (magnet mounting) thanks to protected Mosfet transistor input.
- ESD and reverse wiring protection.
- The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres. Sensors sealed with epoxy will leak after few temperature cycles.
- M12 connector (4-Pin) offers compatibility with numerous sensors used in automation. M12 overmolded cable assemblies are available from many cable manufacturers around the world. Mil cordset are expensive because they are only available from vibration sensor manufacturer. Moreover the 2-Pin mil connector doesn’t allow for optional output like temperature or acceleration.

Description
The hermetic sealed 4-20 mA loop powered industrial accelerometer model 125 is design to monitor the vibration in harsh industrial environment. It uses the industry standard 4-20mA Loop that interfaces directly with PLC, DCS and 4-20mA monitor. Large choice of output (velocity, acceleration, RMS, equivalent Peak) and frequency range will help to fit almost every customer requirements. Their compact size allows for installation in tight places. The dynamic signal output (acceleration or velocity) can allow spectral vibration measurements.

Typical applications
Vibrations measurement in the rugged environments of industrial machinery monitoring. It allows continuous trending of overall machine vibration.

Ordering information model 125.01
To order, specify model number, options and suffix:
125.01-AAAA-2 with Overmolded M12 cable assembly

Note: Peak is based on the true RMS value of vibration. For a sine wave, the equivalent peak output is 1.414 times the RMS value.
**B : Connector**
- 1 : MIL-C-5015, glass seal
- 2 : M12 glass seal
- 5 (CC-DD) : Integral cable
- 7 (CC-DD) : Integral cable with ssil overbraid protection
- 8 (CC-DD) : Integral cable with stainless steel protection conduit

**CC : Cable Type / DD : length in metre**
- 01 : *Polyurethane cable (90°C)*
- 02 : *Teflon FEP Cable (200°C)*
- 03 : Radox cable (120°C, halogen free)
- 5, 7, 8 : epoxy seal

**TT : Optional output (only one optional output is possible)**
- Omitted : no optional output

**T0 : Temperature output**
- 10 mV/V°C. (range +2° to +120°C)

**DA : Acceleration Dynamic Output**
- 100 mV/g ± 30% for VRXX, VPXX, AR05, AP05
- 10 mV/g ± 30% for AR10, AR20, AR50, AP10, AP20, AP50

**DV : Velocity Dynamic Output**
- 100 mV/ips ± 30% for VRXX, VPXX, ARXX, APXX

**MM : Machine thread**
- Omitted : no mounting stud will be shipped with the sensor.
- M6 : M6x1
- M7 : 1/4" 28 UNF 2A
- M8 : M8x1.25

**HH : Housing thread**
- H1 : M16x2 (quick mounting + 120° positioning) (Not stocked)
- H2 : Quick fit mounting (Not stocked)
- H7 : 1/4" 28 UNF-2A. (U.S.A., UK, ...)

**YY : Agency Approval**
- omitted : no agency approval
- Y1 : Atex approved (October 2010)

**Special Engraving :**
- Add ZXX at the end of the part number.
- XX is a number supplied by Vibrasens

**Most Popular model (in stock) :**
- 125.01-VR20-2-DA // 125.01-VR21-2-DA

**Ordering example :**
- 125.01-VR20-2-DA-M6 4-20mA sensor, FS=20mm/s RMS, M12 top connector, Dynamic Acceleration output

**Specifications (24°C)**

**Dynamic**
- Sensitivity : See AAAA ordering information
- Full scale (see AAAA ordering information) : 20 mA ± 5%
- Note : Equivalent Peak is based on the true RMS value of vibration. For a sine wave, the equivalent peak output is 1.414 times the RMS. value.
- Frequency response : See AAAA ordering information
- Mounted Resonant frequency : 25 kHz Nom
- Transverse response sensitivity (20kHz, 5g) : < 5%
- Linearity : ±1% Max
- Turn on time, 4-20 mA loop : < 10 Sec

**Option : Temperature output (T0)**
- Output Range : ±10mV/V°C * Temp (°C)
- Power : Need 4-20 mA loop

**Option : Dynamic acceleration (DA)**
- Sensitivity : See ordering information : 10 or 100 mV/g
- Dynamic : 25 g for 100 mV/g
- 250 g for 10 mV/g
- Power : Need 4-20 mA loop, no constant current source is needed, DC bias=2.6V.
- Frequency response : ±10 % : 3 to 9000 Hz

**Environmental**
- Temperature, operating continuous
- max. loop current ≤ ±10mA
- Temperature, shock
- max. loop current ≤ ±20mA
- Humidity / Enclosure
- Glass seal, Not affected, hermetically sealed, 1E-8torr.l/s
- Epoxy sealing
- Acceleration Limit : Shock
- 250g peak

4-20 mA Vibration Sensor Model 127 Side Connector

Main Characteristics
- Velocity (RMS, Peak) or Acceleration (RMS, Peak)
- Dynamic output available Velocity or Acceleration
- IP67 with associated cable (B=2, 3 only)

Competitive advantage
- Price
- Low cost IP67 overmolded M12 cable assembly
- M12 overmolded cable assembly is available through local electronic distributor
- M12 offers compatibility with sensors used in automation.

Description
The hermetic sealed 4-20 mA loop powered industrial accelerometer model 127 is designed to monitor the vibration in harsh industrial environments. It uses the industry standard 4-20mA Loop that interfaces directly with PLC, DCS and 4-20mA monitor. Large choice of output (velocity, acceleration, RMS, equivalent Peak) and frequency range will help to fit almost every customer requirements. Their compact size allows for installation in tight places. The dynamic signal output (acceleration or velocity) can allow spectral vibration measurements.

Typical applications
Vibrations measurement in the rugged environments of industrial machinery monitoring. It allows continuous trending of overall machine vibration.

Ordering information model 127,01
To order, specify model number, options and suffix:

127.01- AAAA - B (CC-DD) - Options - Accessories

AAAA : Full Scale (=20mA)
AR05 : Acceleration RMS 5g (3Hz to 10kHz ±10%)
AR10 : Acceleration RMS 10g (3Hz to 10kHz ±10%)*
AR20 : Acceleration RMS 20g (3Hz to 10kHz ±10%)
AR50 : Acceleration RMS 50g (3Hz to 10kHz ±10%)

AP05 : Acceleration Peak 5g (3Hz to 10kHz ±10%)
AP10 : Acceleration Peak 10g (3Hz to 10kHz ±10%)
AP20 : Acceleration Peak 20g (3Hz to 10kHz ±10%)
AP50 : Acceleration Peak 50g (3Hz to 10kHz ±10%)

VR10: Velocity RMS 10 mm/s (3Hz to 1000 Hz ±10%)*
VR11: Velocity RMS 0.5 ips (3Hz to 1000 Hz ±10%)
VR20: Velocity RMS 20 mm/s (3Hz to 1000 Hz ±10%)
VR21: Velocity RMS 1 ips (3Hz to 1000 Hz ±10%)
VR51: Velocity RMS 2 ips (3Hz to 1000 Hz ±10%)

VP10: Velocity Peak 10 mm/s (3Hz to 1000 Hz ±10%)*
VP11: Velocity Peak 0.5 ips (3Hz to 1000 Hz ±10%)
VP20: Velocity Peak 20 mm/s (3Hz to 1000 Hz ±10%)
VP21: Velocity Peak 1 ips (3Hz to 1000 Hz ±10%)
VP51: Velocity Peak 2 ips (3Hz to 1000 Hz ±10%)

VRXXX and VPXXX, AR05, AP05
10mV/g ±30% for AR10, AR20, AR50, AP10, AP20, AP50.

Note: Peak is based on the true RMS value of vibration. For a sine wave, the equivalent peak output is 1.414 times the RMS value.

B : Connector / Integral cable
1 : *MIL-C-5015, glass seal
2 : *M12 glass seal
5 : *Integral cable
7 : *Integral cable with stainless steel overbraid protection
8 : Integral cable with stainless steel protection conduit

Option 5, 7, 8 needs additional information (CC-DD)
Options 5, 7, 8 are not stocked. Leadtime : 2 to 4 weeks.

CC : Cable Type (only integral cable B=5, 7, 8)
Specifications (24°C)

**Dynamic**

Sensitivity
- No vibration: 4 mA
- Full scale (see AAAA ordering information): 20 mA ±2%

Note: Equivalent Peak is based on the true RMS value of vibration. For a sine wave, the equivalent peak output is 1.414 times the RMS value.

Accuracy (Repeatability): 2%

Frequency response: See AAAA ordering information

Mounted Resonant frequency: 25 kHz

Transverse response sensitivity (20Hz, 5g): ±0.5%

Linearity: ±1% Max

Turn on time: 4-20 mA loop < 15 Sec

**Option: Dynamic acceleration (DA)**

Sensitivity: 25 g for 100 mV/g output

Power: Need 4-20 mA loop, no constant current source is needed.

Frequency response: ±10%; 3 to 9000 Hz

**Option: Dynamic velocity (DV)**

Sensitivity: 100 mV/in/sec

Dynamic: 1.5 in/sec

Power: Need 4-20 mA loop, no constant current source is needed.

Frequency response: ±3 dB: 1 to 14000 Hz

**Electrical**

Grounding: Isolated from machine ground

Isolation (Case to shield): 100 MΩ Min

Maximum Loop resistance: RI Max=Vdc power - 10V/20mA

Minimum RI wattage: Watt min=0.0004xRI

Power requirements for two wire loop: Voltage: +10 to +30 VDC

Protection: Overvoltage: Yes

: Reverse polarity: Yes

**Environmental**

Temperature, operating continuous: max. loop current =10mA, -55 to 120 °C (-65 to 250 °F)

max. loop current =20mA, -55 to 90 °C (-65 to 212 °F)

Humidity / Enclosure

B=1, 2: Not affected, hermetically sealed, 1E-9torr.l/s

OEM Piezoelectric Accelerometer Model 160

Main Characteristics
- TO-5 eq. Transistor-Style Package
- Small size (9mm), light weight (3 grammes, 0.1 Oz)
- Variety of Sensitivities : 100 mV/g, 11 pC/g...
- Variety of transmission : 2-Wire #ICP/#IEPE transmission mode / 3-Wire Voltage output / 2-wire charge output
- Annular shear mode

Competitive advantage
- Low Cost
- Electronic is protected from Overload (Magnet mounting, shock protected)
- life time hermetic sealing warranty (glass seal and laser weld)
- base strain isolation (easier epoxy mounting)
- exceptional bias stability (improved dynamic range)

Description
The piezoelectric accelerometer model 160 uses a solid-state piezoelectric element in the annular shear mode. It is available with 2-wire ICP - IEPE - LIVM Voltage output for easy compatibility with existing piezoelectric accelerometer. 3-wire Voltage output is also available for simplified operation and connectivity to low power data acquisition unit.

Typical applications
The piezoelectric accelerometer model 160 is design for vibration and shock measurements in high-volume and OEM applications. It is well suited for vibration monitoring and machinery protection.

Ordering information model 160.01
To order, specify model number, options, accessories and suffix :
160.01- AAA - B

AAA : Sensitivity
16V : 100 mV/g ±20% / 2-wire ICP-IEPE transmission

Fig 2a : Electrical layout - 2-Wire ICP / IEPE

Fig 2b : Electrical layout - 3 Wire Voltage Output

Fig 2c : Electrical layout - 2-Wire Charge Output
©ICP Low cost triaxial accelerometer
Model 131

Main Characteristics
• ©ICP transmission mode
• Annular shear mode (better than obsolete compression design)
• Dual case isolation with internal Faraday shield (suitable for permanent installation, no need for insulation pad, no ground loop)
• Low, medium and high frequency version (10, 50, 100, 500, 1000 mV/g)
• Hermetically sealed (laser welded)

Competitive advantage
• Compare to obsolete compression design, annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity to cable motion. Annular shear mode is also less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
• Improved dynamic range (thanks to exceptional bias stability) at elevated temperatures.
• Resistant to shock (magnet mounting) thanks to JFet transistor input.
• ESD and reverse wiring protection.
• The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres. Sensors with epoxy seal will leak after few temperature cycles.
• M12 connector offers compatibility with numerous sensors used in automation. M12 overmolded cable assemblies are available from many cable manufacturers around the world. Mil cordset are expensive because they are only available from vibration sensor manufacturer.

Description
The hermetic sealed triaxial industrial piezoelectric accelerometer model 131 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ©ICP 2-wire voltage transmission technique with a 2 mA minimum constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to ESD to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements. Low frequency accelerometers (A=9X, 0X) incorporate a low-pass filter within the conditioning electronics. This filter attenuate the sensor mechanical resonance and the associated distortion and overload.

Typical applications
Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version will monitor the vibration on roller bearing, pumps cavitation, .... Medium frequency version will monitor overall vibration on pumps, motors, fans, ... Low frequency model is used in the petrochemical, machine tool, and paper industries for monitoring of slow speed agitators, cooling towers, ....

®ICP, triaxial accelerometer Model 138

Main Characteristics

- ®ICP transmission mode
- Annular shear mode (better than obsolete compression design)
- Dual case isolation with internal Faraday shield (suitable for permanent installation, no need for insulation pad, no ground loop)
- medium and high frequency version (10, 50, 100 mV/g)
- Hermetically sealed (laser welded)

Competitive advantage

- World smallest industrial triaxial accelerometer. Industrial means with internal faraday shield isolated from mounting surface.
- Compare to obsolete compression design, annular shear piezoelectric sensors feature better frequency response, improved base strain, lower noise, smaller size, thermal transient immunity and insensitivity to cable motion. Annular shear mode is also less susceptible to transverse vibrations and better immune to electronic saturation at high frequency.
- improved dynamic range (thanks to exceptional bias stability) at elevated temperatures.
- Resistant to shock (magnet mounting) thanks to protected MosFet transistor input.
- ESD and reverse wiring protection.
- The glass seal hermetic connector protects the piezoelectric disc and the electronic from harmful environmental influences, significantly increasing their reliability and lifetime. Associated with low cost IP68 overmolded M12 cable assembly it is a perfect solution for submersible application down to 150 metres. Sensors with epoxy seal will leak after few temperature cycles.
- M12 connector offers compatibility with numerous sensors used in automation. M12 overmolded cable assemblies are available from many cable manufacturers around the world. Mil cordset are expensive because they are only available from vibration sensor manufacturer.

Description

The hermetic sealed triaxial industrial piezoelectric accelerometer model 138 is design to monitor the vibration in harsh industrial environment. It uses the industry standard ®ICP 2-wire voltage transmission technique with a 2 mA minimum constant current supply. Signal ground is isolated from the mounting surface and outer case to prevent ground loops. Faraday shielding will limit sensitivity to ESD to a minimum. Annular shear mode design will prevent from thermal transient and from spurious signal from high transverse vibrations. Low noise electronic and a temperature compensated design will give you accurate result over the complete temperature range. Large choice of frequency range will help to fit almost every customer requirements.

Typical applications

Vibrations measurement in the rugged environments of industrial machinery monitoring. High frequency version will monitor the vibration on roller bearing, pumps cavitation, .... Medium frequency version will monitor overall vibration on pumps, motors, fans, ...

Main Characteristics
- -260°C to 700 °C (-436°F to 1292°F) (options dependant)
- Large choice of options for material and thread
- For top connector accelerometer model 101 and 105

Description
This is the most usual method for accelerometer mounting. These studs are detachable, permitting rapid, low cost replacement. They are used by most accelerometer manufacturers but they are not fully compatible due to the sensor shoulder diameter and the thread length. You should not use ordinary machine screw because they lack a flange or shoulder and might bottom in the accelerometer and degrades his dynamic response. Stud mounting is considered as the most reliable way to mount a vibration sensor. Stud mounting will attain the maximum sensor frequency range. Stud mountind requires a tapped hole drilled directly into the structure. The sensor requires a flat spot faced surface with a perpendicular tapped hole.

Bolt, captive, Hex socket, Model 193

Main Characteristics
- -260°C to 260 °C (-436°F to 500°F)
- Bolt for accelerometer model 103 and 107

Description
This bolt is used to mount side connector industrial accelerometers (model 103 and 107) with through hole mounting.

Ordering information
To order, specify part number, options and suffix:
193.01- AA - C (Mod)
AA : Machine/Structure end
  06 - M6x1
  16 - 1/4 28 UNF 2A
C : Material
  1 - Aisi 303
  2 - Aisi 316L
(Mod)** : modification defined by customers. For example shoulder diameter.

Flat magnet, Model 210

Main Characteristics
- portable route measurements
- high temperature up to 200°C
- for top connector sensors with M5 and 10-32 UNF thread
- for flat surfaces only
- Stainless steel

Description
The use of magnet bases is convenient and quick for many applications (route measurements). They produce an intimate and stiff contact between DC and few kilohertz. The high frequency response (above few kHz) is significantly distorted. Obviously the machine surface should be magnetically attractive and free of paint chips and scale. Painted surface should use our stainless steel magnet target model 208 that greatly improve the high frequency response. We also recommend the use of coupling fluids, such as oil.

Customer should pay attention to magnet attaching on the machine. The shock could overload the vibration sensor and destroy the electronic.

Ordering information
To order, specify part number, options and suffix:
210.01- AA - BB
AA : Sensor thread
  05 - M5x0.8
  15 - 10-32 UNF
BB : Diameter
  19 - 19 mm

Stocked models:
210.01-15-19

Ordering example
210.01-15-19 Flat magnet, 10-32 UNF

Specifications
Dynamic
Frequency response.................................................. 10% : DC to 2.5 kHz
.................................................................see fig 4a

Environmental
Temperature .................................................. -55°C to 200 °C (-67°F to 320°F)

Physical
Dimensions .................................................. See outline drawing Fig 1a
Weight .................................................. ~9.5 gr (0.33 Oz)
Material .................................................. Stainless steel
Magnet .................................................. high temperature rare earth magnet
pull force .................................................. 23 kg (50 Lbs)

Accessories
Magnet targets .................................................. model 208

Competitors cross reference list
Wilcoxon B2a, B4 / CTC online TBD / PCB TBD / AMPO EMID 22 / Dytran

Outline drawing

Mounting drawing

Typical frequency response
Flat magnet, Model 211

Main Characteristics
- portable route measurements
- for top connector vibration sensors with M6 and 1/4" 28 UNF thread
- for flat surfaces only (to be used whenever possible with our magnet targets model 208)
- Stainless steel

Description
The use of magnet bases is convenient and quick for many applications (route measurements). They produce an intimate and stiff contact between DC and few kilohertz. The high frequency response (above few kHz) is significantly distorted. Obviously the machine surface should be magnetically attractive and free of paint chips and scale. Competitors cross reference list
Wilcoxon B3 / CTC online MH103-1B - MH136-1A / PCB 080A121 (080A120) / AMPO EMID 22 (very low pull force)
Main Characteristics
- portable route measurements
- improved frequency response when used with our magnet model 210, 211, ...
- Useful for machine without magnetic surface
- Stainless steel

Description
The use of magnetic mounting pad ensures consistent measurement location for accurate trending. It also greatly improves the frequency response when used with our magnet model 210, 211, ... Magnetic mounting pads / magnet targets are the only way to use flat or curved magnet when the machine to be monitored has no magnetic surface. Our pads feature an abraded adhesive mounting surface for superior bonding.

Cementing - Adhesive pad, Model 202

Main Characteristics
- Permanent mounting in corrosive environment
- For industrial top connector accelerometer
- Stainless steel (AISI 316L)

Description
Cementing pads are used for permanent installations. It eliminates tapping into the structure but provide high frequency capability approaching stud mount. The pad is epoxied in place of the tapped hole; the sensor is then mounted to the pad. Cementing - adhesive pads can provide additional electrical isolation. Adhesive selection is critical for long term reliability. Our cemented pads feature a flat abraded mounting surface for superior bonding and a stud (M5, 10-32 UNF, M6 or 1/4" 28 UNF) for mounting the accelerometer.

Ordering information

## Twisted Pair, Model 600103 & 600104

### Main Characteristics
- Twisted pair shielded cable
- Rund cable
- -55°C to 200 °C (-67°F to 392°F)
- Selection of halogen free & flame retardant cable
- Selection of Stainless steel (AISI 316) overbraid

### Description

![Twisted Pair Cable](image)

Fig 1 : without overbraid (PNR 600103.XX)

Fig 2 : with overbraid (PNR 600104.XX)

- These cables are specifically manufacture for our applications.
- They all have fillers for a perfectly rund cable.
- All cables are available with a stainless steel overbraid for harsh environment.

### Typical application
- They are used for 2-pole sensors that exhibit a low impedance output:
  - ICP, piezoresistive, capacitive accelerometer
  - velocimeter
  - piezoelectric accelerometer with integrated electronic

### Ordering information

To order specify the part number with the following options:
- 600103.XX - AAA or 600104.XX - AAA (for overbraid version)
- **AAA**: Length in meters

Ordering example:
- 600103.21-010 Twisted pair cable, PU, 10 metres

TBD : To be determined
Twisted Pair, Low Noise Model 600050.XX, 600052.XX

Main Characteristics
- Twisted pair shielded cable
- 2 Low noise treatments
- Teflon (PTFE) jacketed
- Rund cable
- -70°C to 260 °C (-94°F to 500°F)
- Stainless steel overbraid is optional

Description

When subjected to flexure and vibration, these cables must not generate noise (triboelectric noise) in excess of the below specifications. To improve the sealing with stuffing gland, the cables use glass fiber fillers for a perfectly rund cable. To improve the mechanical protection, a stainless steel overbraid is available.

Typical application
They are used to transmit low voltage signal from high impedance sensors to signal conditioner at audio frequencies. Twisted pair cables are mainly used by 2-pole differential sensors that have pico Coulomb output:
- Piezoelectric accelerometer or pressure sensor with pico Coulomb charge output

A length not more than 30 metres is recommended between the sensor and his charge amplifier.

Ordering information
To order specify the part number with the following options :
600050.01 - AAA
600052.XX - AAA
AAA : total length in meter
Please indicate minimum continuous length.

Twisted Triples, Model 600106 & 600107

Main Characteristics

- Twisted triples shielded cable
- Rund cable
- -55°C to 200 °C (-67°F to 392°F)
- Selection of halogen free & flame retardant cable
- Selection of Stainless steel (AISI 316L) overbraid

Description

These cables are specifically manufacture for our applications. All cables are available with a stainless steel overbraid for harsh environment.

Typical application

They are used for 3-pole sensors that exhibit a low impedance output:
8 ICP accelerometers with temperature output
Dual output sensor with dual acceleration & velocity

## Cable assemblies, Model 10

### Main Characteristics
- Choice of connectors to interface with various sensor
- Choice of cable to suit various environment
- -55°C to 260 °C maxi (-67°F to 500°F)
- Rugged construction for harsh environment
- Conduit or stainless steel overbraid protection

### Description
10 series are cable assemblies to interface with a variety of industrial sensors. Typical application is to connect a sensor to a junction box or directly to the signal conditioner. It allows to get out in a cooler and less exposed environment where a standard multipair low cost cable could be used.

### Ordering information

4 Channels, Bnc Interface Unit, Model 301

Main Characteristics
- 4 differential channels
- Compatible with all 2 wires sensor
- Din rail mounted (TS35 and TS32)
- Isolated BNC output
- Spring cage terminal block input
- PCB grounding plate connected to din rail

Description
The VibraSens BNC interface unit is a din rail mounted module for permanently installed vibration sensors. Pigtails (signal, common and shield) sensor cables are attached to spring cage terminal block. Data collection equipment with the sensor excitation power are mounted to BNC jack connectors. BNC interface unit do not supply sensor excitation. PCB grounding plates are connected to din rail which greatly improve EMC. VibraSens offers enclosure for 1, 2 or 4 modules but it is not mandatory as the module can take place on any TS35/TS32 Din rail.

Typical applications
BNC interface module is installed in a convenient centralized location away from noisy or unsafe environment where portable collector can record the sensor reading. Simply connect a data collector with sensor excitation power to the BNC jack of the sensor channel of interest to access that sensor’s measurement signal

Ordering information
To order, specify model number :
301.11 BNC Interface unit, Din rail mounted

11 Channels, Switch Interface Unit, Model 302

Main Characteristics
- 11 channels differential switching unit
- High quality rotary switch with 3μm gold plating
- Compatible with all 2 wires sensor
- Din rail mounted (TS35 and TS32)
- Isolated BNC output
- Spring cage terminal block input
- PCB Grounding plate connected to din rail

Description
The VibraSens switch interface unit is a multiple channel connecting centers for terminating and switching the outputs of up to 11 two-wire sensors. Pigtails (signal, common and shield) sensor cables are attached to spring cage terminal block. Data collection equipment with the sensor excitation power are mounted to BNC jack connector. Switch interface unit do not supply sensor excitation. PCB grounding plates are connected to din rail which greatly improve EMC. VibraSens offers enclosure for 1, 2 or 4 modules but it is not mandatory as the module can take place on any TS35/TS32 Din rail. Our module doesn’t include Electrostatic Discharge protection already included in the electronic of our accelerometer.

Typical applications
Switchable interface module is installed in a convenient centralized location away from noisy or unsafe environment where portable collector can record the sensor reading. Simply connect the data collector with sensor excitation power to the BNC jack, and position the selector switch (1-11) in the appropriate position to access individual sensor measurement signals.

4 Ch. , BNC Termination Box, Model 751

Main Characteristics
- 4 differential channels
- Polycarbonate IP66/67 Box (NEMA 1, 4, 4X,6)
- Compatible with all 2 wires sensor
- Isolated BNC output
- Spring cage terminal block input
- PCB grounding plate connected to din rail

Description

The VibraSens BNC termination box collects data for permanently installed vibration sensors. Pigtailed (signal, common and shield) sensor cables are attached to spring cage terminal block. Data collection equipment with the sensor excitation power are mounted to BNC jack connectors. BNC interface unit do not supply sensor excitation. VibraSens offers a large choice of enclosure (polycarbonate, polyester, AISI 316L stainless steel, ..) to be sure it will perfectly fit your application.

Typical applications

BNC termination box is installed in a convenient centralized location away from noisy or unsafe environment where portable collector can record the sensor reading. Simply connect a data collector with sensor excitation power to the BNC jack of the sensor channel of interest to access that sensor’s measurement signal.

Box introduction

Enclosures offer protection against the possible splashing of oil, water or corrosive substances encountered in severe industrial environments, such as off-shore or petrochemical application. These splash-proof enclosures are used for the mechanical and environmental protection of our BNC interface unit.

Polycarbonate Box

Polycarbonate enclosures offer the following benefits:
- Better impact resistance than polyester.
- Better corrosion resistance than painted steel or stainless steel.
- Isolation of the electronic circuit preventing earth loop problems.
- Standard industrial environment.

Polyester Box

Polyester enclosures offer the following benefits:
- Better chemical resistance than polycarbonate.
- Isolation of the electronic circuit preventing earth loop problems.
- Recommended for petrochemical application.

Stainless steel Box

Stainless steel enclosures offer the following benefits:
- Better impact resistance than polyester or polycarbonate.
- Good chemical resistance.
- Recommended for pulp and paper application.

LxWxH mm (inch) .............. 255x180x75 (10x6.9x2.9) see fig 1
Weight gr (Oz) ................. TBD (TBD)

Materials
Material ................................................................. Polycarbonate
Base and cover color ..................................................... RAL 7035
Cover screw (color) ............... Polymide (Grey)
Gasket material ......................... TPE Polyurethane

Environmental
Temperature :
Operating continuous ............................................................................... 40 to +80 °C (-40 to 175 °F)
Short term ............................................................................... 40 to +120°C (-40 to 250 °F)
Chemical resistance ... Good resistance to sea water, acids, solvents, gasolines and oil
Outdoor use ............ Yes

Ratings
Ingress Protection (EN 60529) ................................................................ IP 66/67
Nema Class .......................................................... 1, 4, 4X, 6 (12 & 13)
Impact Resistance (EN 50102) ................................................... IK 08
Electrical insulation .............................. fully insulated
Halogen free (DIN/VDE 0472, part 815) ......................... Yes
UV resistance ..................................................... UL 508
Flammability rating (UL 746 C 5) .......... UL 94 SV
Glow wire test (IEC 695-2-1) ....................... 960°C

Certificates
Germanischer Lloyd (GL), Underwriters Laboratories, Det Norske Veritas, Fimko,
 Europe EN 50298 1998 / EN 60950, Gost R

Accessories, spare parts
Screw for cover .................................................. 711.96
Hinge (2 pieces & Screws) ......................... 711.91
Mounting foot kit without opening the enclosure ............... 711.94
Main Characteristics

- 8 differential channels
- Polycarbonate IP66/67 Box (NEMA 1, 4, 4X, 6)
- Compatible with all 2 wires sensor
- Isolated BNC output
- Spring cage terminal block input
- PCB grounding plate connected to din trail

Description
The VibraSens BNC termination box collects data for permanently installed vibration sensors. Pigtails (signal, common and shield) sensor cables are attached to spring cage terminal block. Data collection equipment with the sensor excitation power are mounted to BNC jack connectors. BNC interface unit do not supply sensor excitation.

Vibrasens offer a large choice of enclosure (polycarbonate, polyester, AISI 316L stainless steel, ..) to be sure it will perfectly fit your application.

Typical applications
BNC termination box is installed in a convenient centralized location away from noisy or unsafe environment where portable collector can record the sensor reading. Simply connect a data collector with sensor excitation power to the BNC jack of the sensor channel of interest to access that sensor’s measurement signal.

Box introduction
See model 751 for help.

Ordering information
To order, specify model number:
748.01 - AA - BB (Suffix)

AA : Channels
- 22 : 22 Channels (Switch)
- 23 : 23 Channels (12 BNC + 11 Switch)
- 24 : 24 Channels (BNC)

BB : Box
- 02 : Polycarbonate enclosure
- 04 : Polypropylene
- 05 : Polyester, Atex approved
- 62 : Stainless steel (AISI316L)
- 99 : To be defined by customer

C : Stuffing glands
- 0 : Not installed
- 1 : installed (indicate diameter and number of cables)

Special engraving
Add Zxx at the end of the part number.
XX is a number supplied by VibraSens.

Popular model (in stock) :
748.01-22-02(LH)-1 / 748.01-23-02(LH)-1 / 748.01-24-02(LH)-1

Ordering example
748.01 - 24 - 02 (LH) - 1
24 CH., BNC termination box, 18 cables dia 5.8 mm

SPECIFICATIONS
BNC Module
See datasheet for model

Fig 1 : Outline drawing, model 749.01-23-02(TH)-1
Sinusoid, Rms-Average Relation Ships

RMS and AVERAGE EQUATIONS
This is valid for all signal.

Average
\[
\text{Average} = \frac{1}{T} \int_0^T x(t) \, dt
\]

Average value gives the DC value of a periodic waveform.

RMS (ROOT MEAN SQUARE)
\[
\text{RMS} = \sqrt{\frac{1}{T} \int_0^T x^2(t) \, dt}
\]

RMS value represents the energy content of a signal.

if \( x(t) = \text{DC} + \text{AC} \)

Then
\[
\text{RMS}(x(t)) = \sqrt{\text{DC}^2 + AC_{\text{RMS}}^2}
\]

TRMS: True Root Mean Square devices mean the calculation of the RMS value is based on the RMS formula.

RMS: Root Mean Square devices mean the calculation of the RMS value is calculated by rectifying the signal, averaging it and multiply it by 1.1. This way of doing is exact for sinusoidal waveform only.

Sinusoids applications

Average = 0.637 \cdot \text{peak}
RMS = 0.707 \cdot \text{Peak}
Peak = 1.414 \cdot \text{RMS}
Peak to Peak = 2 \cdot \text{Peak}

Crest_Factor = \frac{\text{Peak}}{\text{RMS}}
Displacement, Velocity, Acceleration, Relationships

D is defined as the peak to peak value
V is defined as the peak velocity
A is defined as the peak acceleration

Typical applications
If the measured parameter is displacement (Eddy current probe), the two other parameters can be found through a single and double differentiation of the displacement signal.

\[
d = \frac{D}{2} \sin(\omega t)
\]

\[
\nu = \frac{d}{dt}(d)
\]

\[
\nu = \pi f D \cos(\omega t) = V \cos(\omega t)
\]

\[
a = \frac{d^2}{dt^2}(d)
\]

\[
a = -2\pi^2 f^2 D \sin(\omega t) = A \sin(\omega t)
\]

Conversion from acceleration to displacement
If the measured parameter is acceleration, the two other parameters can be found through a single and double integration of the acceleration signal.

\[
a = A \sin(\omega t)
\]

\[
v = \int a dt
\]

\[
v = \frac{A}{2\pi f} \cos(\omega t) = V \cos(\omega t)
\]

\[
d = \int \int a dt = \int v dt
\]

\[
d = \frac{A}{4\pi^2 f^2} \sin(\omega t) = \frac{D}{2} \sin(\omega t)
\]

Metric relationships
The following formulas are valid only for a sinusoidal signal. (D) Displacement, (V) Velocity, (A) Acceleration.

<table>
